- Requires 486SX-25 with 4 MB RAM and 3 MB of hard disk space with a SVGA monitor.

### Description

The powerful TSC Systems now come available with an advanced offline editor, giving users more possibilities. Be able to view your time clock, dimmers, and presets on a table-like format. Naming your presets and channels is easier than ever before, enabling the user to enter in names through a keyboard. All within an application that allows you to view all functions in separate windows.

The Offline Editor allows the users to view programs, edit, and save new programs in a variety of versions: 3.41T, 3.47, 3.48, 3.50, and 5.0. They can also be saved in .tic format for hard drive storage. Settings can be cut and pasted into different shows with a click of the mouse. Be able to print out time clock or holiday features, presets, or configurations on dimmers, combines, and more.

The possibilities on how the Offline Editor can improve and enhance any TSC system is endless. Plus it will run on the most basic machine. It is a must for any TSC user.
